# Tools for Engaging Landowners Effectively Woodland Owner Profile

Aesthetic-focused Owners Southeastern U.S.

### www.engaginglandowners.org

### Introduction

Landowners who primarily own their land for beauty, privacy, and to raise their family are classified as Aestheticfocused Owners. More than one-third of family forest owners with 10+ acres are focused on aesthetic reasons for owning their land. For a large majority of these landowner, the woods are part of their home. Many of them have a strong emotional attachement to their woodlands.

These landowner do participate in managementactivities such as cutting trees for personal use, collecting non-timber forest products, improving wildlife habitat, constructing and maintaining trails, and reducing invasive species. The look and character of their woods is very important to them, and efforts to engage them in forestry should focus on aesthetics as the driver. It is more difficult to engage them in forestry practices that compromise the beauty and privacy value of their land.

# **Basic Statistics**

#### Number and Acreage

- Estimated number of ownerships in this group: **200,000**.
- This group constitutes 35% of total family woodland owners in this geography with 10+ acres.
- Total acreage covered by these ownerships: **14,045,000 acres**.
- This is 34% of the total acres held in wooded acreage of 10+ acres.

### Demographics

Average age: 63 years48% have a college education or higher8% rely on their woods for at least 5% of their income

Non-minority: **96%** Minority: **4%** Male: **73%** Female: **27%** 

These landowner profiles have been developed by the Tools for Engaging Landowners Effectively program (TELE), formerly known as the Sustaining Family Forests Initiative (SFFI). TELE is a collaboration between the USDA Forest Service and the Center for Nonprofit Strategies. TELE aims to gain and disseminate comprehensive knowledge about family forest owners throughout the United States. For more information about TELE, visit www.engaginglandowners.org. The profiles use data from the National Woodland Owner Survey (NWOS) conducted by the USDA Forest Service. The data in this specific summary are based on a sample of 385 families and individuals that own 10 or more acres of woodland in Southeastern U.S. collected between 2017 and 2018. For more information about the NWOS, visit www.fia.fs.fed.us/nwos.
